

4. Create the snapshots like in the picture below using one of the virtual machines created in the previous exercises. Before each snapshot, you must change something in the operating system. This tool is normally used when performing a critical action or installing software. But, in this case, you can do something so easy as creating a new file to study the different states.

Sergio, sorry I am not commenting on every screenshots since I have been trying to do the process at the same time than you.

It is still keeping the file I had created for version 2.2.
